

Comparison Report 2026-06-02

Datasets: legacy256_overfit50, wikiart512_5style, distinct5_512

Metrics: clip_style vs 1-LPIPS, target-wise aggregate ArtFID

Plot rule: LANCET is shown as an unconnected scatter cloud.

Timing notes

- SaMAM 512: 0->5k about 2h06m; 0->10k about 4h25m. Style peak appears at 5k; LPIPS keeps improving through 10k.
- SaMAM 256: 0->15k about 2h24m30s; 17k->25k about 1h31m52s. Later training mostly buys LPIPS.
- SaMST strict historical reference: 750-image inference about 39.8s. Current wikiart512 e5/e10 generation took about 194s for 750 images, with reuse eval about 23-28s and target-wise ArtFID aggregation about 149-154s.
- LANCET timing is heterogeneous across archived and remote runs, so this report does not place a single normalized training-time number beside every LANCET point.

Legacy256 / overfit50

- Best non-idt CLIP style comes from a LANCET historical point cloud run (epoch_0020).
- Best non-idt 1-LPIPS and best ArtFID both come from different baselines, not the same model.
- This dataset is saturated by metric hacking pressure; idt remains a strong content extreme.

full: Best style: LANCET / epoch_0020 | clip_style=0.7369, 1-LPIPS=0.1549
full: Best content: LANCET / o20a | clip_style=0.6673, 1-LPIPS=0.7038
full: Best ArtFID: SaMAM / SaMAM best-content (25k) | aggregate ArtFID=248.71
transfer: Best style: LANCET / epoch_0020 | clip_style=0.7363, 1-LPIPS=0.1472
transfer: Best content: LANCET / o20a | clip_style=0.6299, 1-LPIPS=0.7027
transfer: Best ArtFID: SaMAM / SaMAM best-content (25k) | aggregate ArtFID=277.27

Aggregate ArtFID | transfer

WikiArt512 / 3600 per style

- LANCET owns the highest CLIP style among evaluated non-idt points.
- SaMAM 10k owns the best non-idt 1-LPIPS and best aggregate ArtFID.
- SaMST e5/e10/e15 moves only slightly; the curve is nearly flat on both axes.

full: Best style: LANCET / local WSL hist b32 e8 | clip_style=0.7923, 1-LPIPS=0.6450

full: Best content: SaMAM / SaMAM 10000 | clip_style=0.7851, 1-LPIPS=0.8357

full: Best ArtFID: SaMAM / SaMAM best-content (10k) | aggregate ArtFID=254.39

transfer: Best style: LANCET / local WSL hist b32 e8 | clip_style=0.7853, 1-LPIPS=0.6443

transfer: Best content: SaMAM / SaMAM 10000 | clip_style=0.7774, 1-LPIPS=0.8356

transfer: Best ArtFID: SaMAM / SaMAM best-content (10k) | aggregate ArtFID=328.58

Distinct5-512 / 1000 per style

- SaMST e15 is the best style point in CLIP style.
- LANCET wins the best non-idt 1-LPIPS and the best aggregate ArtFID.
- This is the one dataset where LANCET clearly beats SaMST on content-side metrics.

full: Best style: SaMST / SaMST e15 | clip_style=0.7247, 1-LPIPS=0.3745

full: Best content: LANCET / F e1 | clip_style=0.6969, 1-LPIPS=0.6814

full: Best ArtFID: LANCET / LANCET full | aggregate ArtFID=122.63
